**PUBLIC PROCUREMENT: PROCESS AND SITUATIONAL  
APPROACHES TO DISCLOSURE OF THE NATURE  
OF MANAGEMENT ACTIVITIES**

*The system of public order acts as a mechanism to meet the needs of the state for goods, works and services required for the public authority on the basis of competitive selection of suppliers. The need for balanced operation of the system due to the dual nature for public procurement. On the one hand, the state acts as a buyer and any buyer seeks to minimize its costs. On the other hand the state is a special subject with a socially and economically significant functions. What, who and how it will procure goods, works and services depends on economic development in general. Absence of thorough scientific public procurement as one of the areas of public administration, has led to consideration of its relevance in terms of two classical approaches to management: process and system.*
